calc.py

```
a = 10
b = a
a = a - 5
c = 2
print(a)
print('b = ', a)
print('a/c = ', a/c)
print(b * c)
d = float(input('Give me a number: '))
print('The sum is:', a + b + c + d)
```

Variables

Name	Value

Input

12.3

Output

sphere.py

```
import math

r = float(input("What is the sphere's radius in cm? "))
volume = (4/3) * math.pi * r**3
area = 4 * math.pi * r**2
print(f"The volume is {volume} cubic cm and the area is {area} square cm.")
```

Variables

Name	Value

Input

2

Output
